Authors

Bell, K. J., 27 (3–4)
Boyer, R. C., 19 (1)
Chenoweth, J. M., 28 (2)
Desmond, R. M., 59 (1)
Graham, R. W., 39 (1)
Jumper, E. J., 76 (3–4)
Kataya, M., 28 (1)
Klein, R. E., 76 (3–4)
Lehrer, I. H., 95 (3–4)
Maddox, R. N., 27 (3–4)
Margittai, T. B., 40 (3–4)
Mori, S., 28 (1)
Najjar, M. S., 27 (3–4)
Pase, G. K., 19 (1)
Rodriguez, F., 23 (2)
Shah, M. M., 51 (2)
Smyth, R., 90 (3–4)
Taborek, J., 28 (2)
Tanimoto, A., 28 (1)
Webb, R. L., 46 (3–4)
Withers, J. G., 48 (1); 43 (2)
Yarden, A. L., 70 (3–4)

Numbers in parentheses are issue numbers.

Titles

A comparative assessment of RODbaffle shell-and-tube heat exchangers, 90 (3–4)
A general predictive technique for heat transfer during saturated film boiling in tubes, 51 (2)
A new look at the old problem of altitude derating of air-cooled high-power broadcast tubes, 76 (3–4)
An engineering view of wind chill, 23 (2)
Comment on laboratory models of surface heat loss, 59 (1)
Communication on jacket-side heat transfer, 95 (3–4)
Flow-induced tube vibration data banks for shell-and-tube heat exchangers, 28 (2)
Fundamental mechanisms that influence the estimate of heat transfer to gas turbine blades, 39 (1)
Large-scale heat transfer research and testing, 70 (3–4)
Performance of counterflow, parallel plate heat exchangers under laminar flow conditions, 28 (1)
The cartridge heat exchanger: a new concept for difficult services, 40 (3–4)
The energy-saving nests concept, 19 (1)
The evolution of enhanced surface geometries for nucleate boiling, 46 (3–4)
The influence of improved physical property data on calculated heat transfer coefficients, 27 (3–4)
Tube-side heat transfer and pressure drop for tubes having helical internal ridging with turbulent/transitional flow of single-phase fluid. Part 1. Single-helix ridging, 48 (1)
Tube-side heat transfer and pressure drop for tubes having helical internal ridging with turbulent/transitional flow of single-phase fluid. Part 2. Multiple-helix ridging, 43 (2)

Journal of
Thermal Stresses

AN INTERNATIONAL QUARTERLY

Editor-in-Chief:
RICHARD B. HETNARSKI,
Department of Mechanical Engineering, Rochester Institute of Technology, Rochester, New York

The first international journal devoted exclusively to the area of thermal stresses, this quarterly publishes refereed articles relating both to theory and industrial applications. It is intended to be a forum for those engaged in analytical as well as experimental research and includes mathematical papers along with practical, applications-related articles.

In particular, the *Journal of Thermal Stresses* follows new developments in thermoelasticity, thermoplasticity, and theory and applications of thermal stresses, as well as numerical methods in thermal stresses, including the finite element method. Papers in other areas, notably thermodynamics and heat transfer, if related to thermal stresses, are also published. Review articles in particular areas of thermal stresses are invited.

Journal of Thermal Stresses is of special interest to: mechanical engineers, aerospace engineers, applied mathematicians, physicists, and all those involved in solid body mechanics, stress analysis, and thermal effects in structures.

Volume 5: 1982, 4 issues/volume, approx. 400 pages/volume
ISSN: 0149-5739; CODEN: JTSTDA
